

Undergraduate Student Research Support Program
AY 2015-16 Report

The COAST Undergraduate Student Research Support Program provides \$2,500 annually to every campus to stimulate undergraduate student engagement in faculty-mentored marine, coastal and coastal watershed related research. Through this program, COAST aims to increase the number of CSU undergraduate students participating in research and provide them with the opportunity to obtain the skills necessary to join a highly skilled and technologically advanced workforce. COAST also encourages faculty members to use the program to meaningfully engage first and second undergraduate students as well as historically underrepresented minority, low-income and first-generation college students.

In AY 2015-16, a total of 77 students throughout the system were supported. COAST relied upon officially appointed Campus Representatives to implement the program on their campuses. The Representatives at each campus created their own application process, accepted applications and allocated funding. Campuses marked with an * provided match funding.

Table with 6 columns: Campus, Recipient, Program/Major, Advisor, Project Title, Award Amount (Campus Match). Rows include awards from Bakersfield, Channel Islands, Chico, and Dominguez Hills.
